KINETIC WETTING IN COATING AND THE METHOD  
OF ITS MEASUREMENT. [1960] 8p. 8 refs. M1962.  
Order from LC or SLA mi\$1.80, ph\$1.80 61-13343

Trans. of Zhurnal Nauchnoy i Prikladnoy Fotografii i  
Kinematografii (USSR) 1956, v. 1, p. 354-358.

The action of wetting agents on coating is determined by their kinetic adsorption in the zone of contact between the emulsion and the base. Wetting agents exhibiting good wetting properties are characterized by a larger value of  $\Delta$  and  $\gamma_{10}$ ; with a decrease in these values the wetting properties are diminished. The anti-comet action of a wetting agent depends on the structure of the polar groups and the length of the hydrocarbon radical, while the anion-active substances (101, 102, and 103) show better anti-comet activities; from which it must be noted that a direct connexion is not observed between kinetic adsorption and anti-comet activity. Deygen, M. F.  
THE THEORY OF MAGNETIC PROPERTIES OF  
METAL-AMMONIA SOLUTIONS (Teoriya Magnitnykh  
Svoystv Metall-ammiachnykh Rastvorov). Nov 60  
[17]p. 11 refs.  
Order from LC or SLA ml\$2.40, ph\$3.30 AEC-tr-4257

Trans. in manuscript of Zhurnal Eksperimental'noy  
i Teoreticheskoy Fiziki (USSR) 1954, v. 26,  
p. 293-299.

On the basis of evidence concerning local electronic  
centers in ionic dielectrics (polarons, color centers  
and double color centers) a theory of magnetic prop-  
erties of metal-ammonia solutions has been devel-  
oped. Equilibrium concentrations and coefficients of  
magnetic susceptibility have been determined. The  
coefficient of magnetic susceptibility for the solution,  
as a function of temperature and metallic atom con-  
centration, has also been calculated. The results of  
this theory have been confirmed by the corresponding  
experiments. (Author)
